

Re-run Failed Scripts

The following procedure helps you understand how to rerun a failed data migration script:

1. On the Data Migration Job page, right-click against the failed script and click **Inspect** from the drop-down menu that appears. The console section appears.

2. Under **Sources**, search for the file `DataMigration.js`.

3. Select the file displaying all the batch details.

4. Scroll down to Line number 61 to view the list of all batches that have run. The `LastBatchID` attribute displays the name of the last batch that was run.

5. Click  to add a debugger on the line. The script pauses.

6. Click the `ApexJobList` attribute to view the jobs that are executed. The Array 1 job list box appears.

7. On the right panel, under **Watch** click the  that appears next to the jobs to empty the job list.

8. Click **+** to add a new expression.

9. Type

```
apexJobList = [ ] .
```

Click . This enables the **Run Script** button on the Migration jobs as shown.
