Associate the Webhook with the Workflow Rule

Follow these steps:

1. Go to Setup > Automation > Workflow Rules and click
Create Rules

×

Choose the Module for which you need to create a Workflow rule, then provide the rule name and description

×

3. Select the When condition for the rule to execute. For this example, we are creating a workflow rule which will trigger an automated message to leads when a lead is created in Zoho CRM.

×

4. Select the records to which this rule should be applied

×

5. Select Webhook in Instant Actions

×

6. Select and associate the Webhook that you created

×

The module selected for the Workflow rule and the module selected for the Webhook should be the same.

7. Click on the **Save** button to finalize this process and associate the Webhook with the Workflow.

×
